

Finance Analytics Dashboard - Recruiter Project Summary

This document provides a concise overview of the Finance Analytics Dashboard project, including the business problem, solution approach, key metrics, technical implementation, and business value delivered.

Business Problem

Financial organizations generate large volumes of transaction data every day. Without a centralized reporting solution, stakeholders face challenges in monitoring transaction activity, tracking revenue, understanding tax and fee collections, and comparing current performance against previous periods. Manual reporting is time-consuming and often delays decision-making.

Solution Developed

Built an interactive Power BI Finance Analytics Dashboard that consolidates transaction data into a single reporting platform. The dashboard enables users to monitor KPIs, perform year-over-year analysis, analyze financial trends, and gain actionable insights through dynamic visualizations.

Key Business Objectives Solved

- Track total transaction volume and value.
- Monitor tax and fee collections.
- Measure average transaction value.
- Compare performance with previous years.
- Identify growth and decline trends.
- Support data-driven financial decision making.

Technical Skills Demonstrated

- Power BI Dashboard Development
- Data Modeling
- Power Query (ETL)
- DAX Calculations
- Time Intelligence Functions
- Business Intelligence Reporting
- Data Visualization
- Financial Analytics

Important DAX Measures

Total Amount = SUM(amount)

PY Amount = CALCULATE([Total Amount], SAMEPERIODLASTYEAR(Date))

YOY Amount = [Total Amount] - [PY Amount]

YOY % = DIVIDE([YOY Amount],[PY Amount],0)

Total Transactions = DISTINCTCOUNT(transaction_id)

Average Transaction Value = AVERAGE(amount)

Total Fees = SUM(fee_amount)

Total Tax = SUM(tax_amount)

Business Impact

The dashboard improves reporting efficiency, provides faster access to financial insights, enables performance monitoring through KPIs, and helps stakeholders make informed decisions using data rather than manual analysis.
